

Engineered Materials Solutions

Extending Your Reach with Engineered Materials

Marc,

Thought I needed to send a note to tell you what a great job is being done here by Mike Bashaw. I feel he goes beyond the scope of vibration testing and gives me detailed reports each day. These things that he reports might be brushes on a motor that are very close to the wear limit, or an unguarded sheave that is a potential hazard to personnel, noisy motors, motors running hot, etc, etc. In a time where it seems harder and harder to find good service, you guys come up strong, because of the likes of Mike and others in your organization that service our business on a regular basis.

Thank you for the great service,

Fred Hall
